1 INTRODUCTION

1.1 SCOPE
This Product Specification (PS) describes the content and defines the data dictionary of the Additional Military Layers: Gridded Sediment – Environment Seabed & Beach (AML GS-ESB) product, independent of any exchange standard data format. The schema and data format imposed by the chosen exchange standard implementation are defined in separate annexes (where provided).

This is a supplementary Product Specification which describes an improved modelling of the geo-acoustic subset of parameters contained in the AML ESB PS. This PS will cease to exist as a separate entity when aligned with the ESB PS at its next revision. The NetCDF annex C to this document will then apply to the geo-acoustic subset of the ESB PS.

It has been prepared in accordance with NATO STANAG 7170, Additional Military Layers and the draft NATO STANAG 4564, Performance Standards for Warship Electronic Chart Display and Information System (WECDIS) Data Products. It is based on the proposed Common Product Specification Framework (CPSF) which is contained as Annex B to the draft STANAG 4564.

The AML GS-ESB Product Specification is designed to facilitate the encoding of the following components:
- Geo-acoustic properties of the sediment layer, at one or more fixed (X,Y) grid points.

AML GRIDDED SEDIMENT – ENVIRONMENT SEABED & BEACH MUST NOT BE USED IN ISOLATION FOR NAVIGATIONAL PURPOSES

1.2 GENERAL INFORMATION ON THE PRODUCT SPECIFICATION
1.2.1 Version Number
The Version Number is 1.0

1.2.2 Date of Issue
The Date of Issue is 28th July 2005
1.2.3 Custodian of the Product Specification
The Custodian of this specification is The United Kingdom Hydrographic Office.

United Kingdom Hydrographic Office
Admiralty Way
Taunton
Somerset
TA1 2DN

Telephone: +44 (0)1823 337900
Fax: +44 (0)1823 284077
E-mail: aml@ukho.gov.uk

1.2.4 Relevant STANAG Number
STANAG 7170 Additional Military Layers (AML)

1.3 STATUS OF THE PRODUCT SPECIFICATION
This product specification will be endorsed by the Geospatial Maritime Working Group of the NATO Geographic Conference and is subject to the change control procedures implemented by that group.

1.4 SECURITY
1.4.1 Security Classification of the Specification
The Product Specification is UNCLASSIFIED

1.4.2 Security Classification of the Product
AML GS-ESB can be issued at various security classification levels according to content. AML GS-ESB products of differing security levels (specified at the dataset level by the ‘Protective Marking’ and ‘National Caveat(s)’ details) are physically partitioned.

The table at section 5.3 contains details of how AML GS-ESB security classification information must be described in this product.
### 1.4.3 Copyright Statement

Producers of AML datasets must ensure that:

- the Intellectual Property Rights of those owning the information that has been used for production of the AML product is not compromised.
- sufficient mechanisms are put in place to ensure that material is not copied either in whole or part, except as specifically required within the host system, without prior agreement of the data producer and any other copyright holders.

Copyright statements should be shown at the following locations:

- on the product label
- on the product packaging
- within the product

### 1.5 CONTENTS OF THE DOCUMENT

The AML GS-ESB Product Specification defines the real-world features, attributes and metadata required for the production and use of the data product. It is laid out as described in the table of contents.

Also included, as annexes to the Product Specification, are details of the implementation using the relevant exchange standard(s).

Each annex (if included) is identified as follows:

- AML GS-ESB NetCDF Implementation (ANNEX C)

A cross-reference in the text will be included for instances when there are relevant details in one or more of the implementation annexes.

### 1.6 REFERENCES

The following standards and specifications affect the content of this Product Specification.

#### 1.6.1 Standards

- **NATO STANAG 1059(Edn 6)**: Distinguishing Letters for Geographical Entities for use in NATO.
- **NATO STANAG 2211**: Geodetic Datums, Ellipsoids, Grids & Grid References
- **NATO STANAG 7170**: Additional military Layers.

GS-ESB
PRODUCT SPECIFICATION
GEOACOUSTICS

1.9 Maintenance and Support of the Product Specification
Specific processes and mechanisms that are established for the maintenance of AML Product Specifications are described in the sections 1.9.1 to 1.9.6 below.
1.9.1 Frequency of Review
The AML GS-ESB Product specification (version 1.0) will be frozen until the full ESB product is unfrozen in July 2006 at which point a reconciliation of the ESB Product Specifications will take place.

1.9.2 Method of Maintenance
Corrections, clarifications and requests for change will be administered by the custodian. Discussion regarding proposed changes will be carried out by correspondence with national Points of Contact. Consolidated maintenance documents will be issued periodically containing published corrections and clarifications together with details of agreed extensions (these will be formally incorporated into the Product Specification and become live at its next revision).

Changes to the Product Specification beyond extensions will be reviewed by committee during preparatory work for production of the next edition of the specification.

1.9.3 Method of Promulgation
Maintenance documents, new editions of specifications, and related documentation will be sent to nations through their appointed AML point of contact or published on the AML website.

1.9.4 Authority Responsible for Maintenance
AML Product Specifications will be maintained by the Custodian specified in section 1.2.3.

1.9.5 Error Reporting/Change Request Procedure
Comments concerning the content of the AML Product Specifications and requests for change should be addressed to the Custodian.

1.9.6 Available Support
Contact the Custodian for guidance and advice relating to this product specification.

---

1 Will be a specific group reporting to the GMWG or its successor.
2 GENERAL PRODUCT DESCRIPTION

PRODUCT TITLE
Additional Military Layers – Gridded Sediment – Environment Seabed & Beach.

SHORT TITLE
AML GS-ESB

REFERENCE
NATO STANAG No.7170 (Additional Military Layers).
NATO STANAG No. 4564 (Performance Standards for Warship Electronic Chart Display and Information System (WECDIS), Edition 1, Annex B, Data Products.

2.1 MAINTENANCE OF THE DATA PRODUCT
The frequency and method of provision of update or replacement data will be defined by each AML producing agency.

2.2 SUPPORT FOR MULTIPLE MODES OF OPERATION
Data may be made available at the grid sizes shown in the following table.

<table>
<thead>
<tr>
<th>SCALE BAND</th>
<th>COMPUTATION GRID SIZE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>20 degrees or coarser</td>

2.3 GEOGRAPHIC ORGANISATION

2.3.1 Regional Scheme
AML GS-ESB products may be global or partitioned by geographic region.

2.3.2 Tiling Scheme
See appropriate annex.

2.4 LAYER ORGANISATION
The content of the product is not layered. However, specific exchange standards may impose their own internal layering requirements. See appropriate annex.

2.5 EXCHANGE STANDARD IMPLEMENTATION
This product specification has been written to be independent of the exchange standard used. Details of exchange standard implementations are given in the relevant annex.

2.5.1 Spatial Data Type
AML GS-ESB contains gridded data, each grid point consists of the two spatial dimensions; x (eastwards) and y (northwards). Sediment details are attributes of the point data.

2.5.2 Level of Topology
See appropriate annex.

2.5.3 Relationship with Layering
See appropriate annex.

2.5.4 Textual Information
Attributes that contain free text must not be used when it is possible to encode the information by means of any other attribute.

2.5.5 Reference to External Files
Text and picture files may also be included in the AML product to provide additional information.

Below are examples of potential formats.

- ASCII
- TIFF
- PDF
- HTML
- JPEG
- AVI
- MPEG

2.6 SIZING REQUIREMENTS
Data producers should partition datasets such that data access time in the receiving system is acceptable to users. This will vary between data types and receiving systems.
2.7 GENERAL SOURCE DESCRIPTION

2.7.1 Minimum Source Requirements
Sources detailed in section 5.5.1 meet the following requirements
- the data capture point-density fulfils the data capture requirements appropriate to
  the scale bands specified in section 2.2.
- the mandatory attribution levels for each object, specified in section 5.5.2, are
  met.
- There is no minimum grid resolution requirement but it should be (as fine as
  possible) supported by observations and rendered at the appropriate grid size.

2.7.2 Applicable Sources
All sources used must meet the minimum requirements.
3  GENERAL DATA DESCRIPTION

3.1  DATUMS
Please refer to NATO STANAG 2211 - Geodetic Datums, Ellipsoids, Grids & Grid References, which establishes the NATO guidelines to the use of horizontal and vertical datums.

3.1.1  Horizontal Datum
The horizontal datum for the AML GS-ESB is the World Geodetic System 1984 (WGS 84).

3.1.2  Vertical Datums

3.1.2.1  Height Datum
N/A

3.1.2.2  Sounding Datum
N/A

3.2  UNITS
The default units to be used in AML GS-ESB are:
- Position: latitude and longitude in decimal degrees
- Depth/Height/Length/Width: metres
- Positional accuracy: metres
- Distance: nautical miles or metres
- Layer Thickness: metres
- Two way travel time: seconds
- Sediment density: Kilograms per cubic metre
- Sound speed gradient: s⁻¹
- Sound speed curvature: m⁻¹s⁻¹
- Absorption coefficient: Decibels per wavelength
- Absorption coefficient gradient: Decibels per wavelength per metre
- Porosity: Percentage
- Shear sound speed: Metres per second
- Shear absorption: Decibels per wavelength

3.3  CO-ORDINATE SYSTEM
The co-ordinate system used by AML GS-ESB is Latitude and Longitude. These will be recorded as:

Positive values: Used for latitudes north of the equator and longitudes east of the Greenwich Meridian.

Negative values: are used for latitudes south of the equator and longitudes west of the Greenwich Meridian.

3.4  PROJECTION
AML GS-ESB is based upon geographical co-ordinates and is not projected.
3.5 LANGUAGE AND CHARACTER SETS

3.5.1 Language
The exchange language used by AML GS-ESB is English.

3.5.2 Character Sets
ISO 8859-1 supports English and most European languages. For those languages that it does not support ISO/IEC 10646 shall be used.

3.6 DATA QUALITY
AML GS-ESB data quality information should be encoded at an appropriate level, as defined in sections 5.3.1 & 5.5.2 and as specified by the exchange standard implementation.

AML data quality information encompasses the following categories:

- Quality of observed data
- Quantity of observed data
- Source(s) of the data
- Completeness for the Product Specification
- Data processing techniques

Data quality information defined for AML GS-ESB can be encoded in the dataset as:

- Dataset metadata (see sections 5.3.1)
- Attribute on a Sediment Layer Distribution Grid Point (see sections 5.5.2)

3.6.1 Quality of observed data
It is assumed that the observed data will have been subject to a degree of scrutiny appropriate to the quality standards of the originating authority. The originating authority should be consulted for details of the quality standards applied.

3.6.2 Source(s) of the data
The source of the data should be quoted, refer to the originating authority for further details.

3.6.3 Completeness for the Product Specification
AML products may be produced to fulfil operational requirements, and therefore, may not contain all available information.
All AML datasets must specify instances when:

- All available data/information has been encoded. Missing data means that the information is not available
- Only specified/required data/information is encoded.

3.6.4 The following are not explicitly encoded due to the complexity of the subject but short comment may be made in the “supporting textual information” field
3.6.4.1 Quantity of observed data
It is assumed that the quantity of observed data is sufficient to support the resolution of the GS-ESB product supplied by the originating authority. The originating authority should be consulted for details of the data density standards applied.

3.6.4.2 Data processing techniques
The originating authority should be consulted for full details of the standards and or techniques applied.
4 DATA STRUCTURE
Refer to the appropriate implementation annex for details of specific implementation, format, and structure.
5 DATA DICTIONARY

5.1 GENERAL GUIDELINES
This section provides real-world descriptions for the metadata, features and attributes contained within the AML GS-ESB dataset. Details of how this information is to be encoded (e.g. using the chosen Exchange Standard) can be found in the implementation annexes.

5.2 UNKNOWN/MISSING ATTRIBUTE VALUES
The way in which an unknown or missing attribute value is handled is dependent upon the exchange standard implemented, see appropriate annex.

5.3 USE OF META INFORMATION
Any meta information stored as attributes of features will override meta information stored at the data-set level. AML datasets contain the following meta-information:

5.3.1 Dataset Metadata
The following table provides the descriptions of dataset meta information required by AML GS-ESB to conform to this Product Specification.

For details of how to represent the dataset metadata described, refer to the appropriate exchange standard implementation annex.

<table>
<thead>
<tr>
<th>General/Production Information</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Production Agency</td>
<td>The agency responsible for the production of the data</td>
</tr>
<tr>
<td>Dataset Name</td>
<td>The name of the dataset</td>
</tr>
<tr>
<td>Edition Number</td>
<td>The edition number of the dataset</td>
</tr>
<tr>
<td>Date of Release</td>
<td>The date the dataset was made available by the data producer (e.g. edition or revision date)</td>
</tr>
<tr>
<td>Product Specification Description</td>
<td>The name of the AML Product Specification to which the dataset conforms (see section 2)</td>
</tr>
<tr>
<td>Product Specification Version Number</td>
<td>The version number of the AML Product Specification to which the dataset conforms (section 1.2.1)</td>
</tr>
<tr>
<td>Product grid size/scale band</td>
<td>The grid size or scale band of the dataset (see section 2.2)</td>
</tr>
<tr>
<td>Data Quality</td>
<td>Red = Poor, Amber = Marginal, Green = Reliable.</td>
</tr>
<tr>
<td>Completeness for the Product Specification</td>
<td>All available data has been encoded, or not</td>
</tr>
<tr>
<td>Data coverage</td>
<td>The content of the data-set described as geographic coverage, extent of spatial objects or inclusion of features.</td>
</tr>
<tr>
<td>Security Classification Information</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------</td>
<td>-------------</td>
</tr>
<tr>
<td>International Defence Organisation (IDO) status (see note)</td>
<td>The International Defence Organisation (IDO) status (if applicable) that must precede, and be applied to, the Protective Marking thus making it an IDO Marking. - North Atlantic Treaty Organisation (NATO) - North Atlantic Co-operation Council (NACC) - Partnership for Peace (PfP) - Western European Union (WEU)</td>
</tr>
<tr>
<td>Protective marking</td>
<td>A marking indicating the minimum standards of protection required of the data. - COSMIC TOP SECRET - FOCAL TOP SECRET - TOP SECRET - SECRET - CONFIDENTIAL - RESTRICTED - UNCLASSIFIED</td>
</tr>
<tr>
<td>Owner Authority</td>
<td>The NATO country code (NATO STANAG 1059) denoting the ‘owner’ that is responsible for establishing and setting the protective marking level</td>
</tr>
<tr>
<td>Caveat (see note)</td>
<td>A component of a security clearance and/or security class used for computing access rights and controlling information flow by authorising a specific group of subjects to have access to the information</td>
</tr>
<tr>
<td>Copyright Statement</td>
<td>Indicates any copyright or releaseability restrictions on the data</td>
</tr>
<tr>
<td>Grid Type</td>
<td>Statement of whether the grid is a lattice, domain or other type.</td>
</tr>
</tbody>
</table>

NOTE:
International Defence Organisation (IDO) markings and caveats are mutually exclusive. If the data has an IDO status, then the caveat is not applicable. Additionally, caveats only apply to data that has a Protective Marking of CONFIDENTIAL or above.

5.4 MANDATORY META INFORMATION
All dataset meta information stated in section 5.3.1 is mandatory, see 5.5.2 for mandatory associated attributes.

5.5 SCHEMA
The following tables (5.5.1, 5.5.2 and 5.5.4) provide the descriptions of meta information, real-world features, and associated attributes required by AML GS-ESB to be attributed as complete for this Product Specification. Regular grid points or centres of
latitude/longitude cells can be considered as zero-dimensional or point features, and geo-acoustic parameters at these points as associated attributes.

For details of how to represent the real-world features and associated attributes described, refer to the appropriate exchange standard implementation annex.

### 5.5.1 Meta Information

The following tables contain non-mandatory generic or data-set meta information.

<table>
<thead>
<tr>
<th><strong>External Reference Information</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Source</td>
<td>Reference volumes or external databases of geo-acoustic data.</td>
</tr>
<tr>
<td>Originating Authority</td>
<td>The supplier of the source data.</td>

<td>Reference to a specific location of any relevant information within an external publication</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Other Supporting Information</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Supporting textual information (in national language characters)</td>
<td>Supporting (free text) information relevant to the object that cannot be explicitly encoded by any other attribute. Eg. Data processing techniques</td>
</tr>
</tbody>
</table>

See also 5.3.1, 5.5.2 & 5.5.4

### 5.5.2 Features

The Sediment Layer Distribution Grid Point in AML GS-ESB can be a grid point where a geo-acoustic parameter is sampled (lattice grid, in which case interpolation is valid) or the centre of a latitude/longitude cell over which the field is averaged (domain grid, in which case interpolation is not valid). The following table contains the information described below:
• Feature – gives the name of the feature.
• Description – describes the feature.
• Associated Attributes – indicates allowable attributes relevant to each feature. (see section 5.5.4 for attribute descriptions and values.)
• M – denotes that the attribute field is mandatory (also emboldened text)
• Form – indicates the geometric form that the feature class can take (i.e. **Point**, **Line**, or **Area**)

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
<th>Associated Attributes</th>
<th>Form</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sediment Layer Distribution Grid Point</td>
<td>A geographical point to which the sediment layer distribution information is appended</td>
<td><a href="#"><strong>HF bottom loss category</strong></a>, <a href="#"><strong>LF bottom loss category</strong></a>, <a href="#"><strong>N-layer</strong></a>, <a href="#"><strong>Layer thickness</strong></a>, <a href="#"><strong>Two-way travel time</strong></a>, <a href="#"><strong>Sediment Density</strong></a>, <a href="#"><strong>Relative sound speed at the top of the layer</strong></a>, <a href="#"><strong>Sound speed gradient</strong></a>, <a href="#"><strong>Absorption coefficient</strong></a>, <a href="#"><strong>Absorption coefficient gradient</strong></a>, <a href="#"><strong>Porosity</strong></a>, <a href="#"><strong>Shear sound speed</strong></a>, <a href="#"><strong>Shear absorption</strong></a>, <a href="#"><strong>Quality</strong></a></td>
<td></td>
</tr>
</tbody>
</table>
In addition to the ‘associated attributes’ listed for individual real-world features ‘generic attributes’ are used at the data-set level. These encode meta and supporting information that may exist on any feature. Generic attributes used in AML GS-ESB are described in section 5.3.1 & 5.5.1.

For details of how to encode the features listed in this section, refer to the appropriate exchange standard implementation annex.

### 5.5.3 Mandatory Features

#### Sediment Layer Distribution Grid Point

### 5.5.4 Attributes

The geo-acoustic parameters can be considered as attributes of the point features. The table below displays the following information:

- **Attribute** – gives the name of attribute.
- **Definition** – gives a more detailed description of the attribute if required.
- **Values** – specifies the range of values and units of measurement the attribute may take for.

For details of how to encode the attributes listed in this section, refer to the appropriate exchange standard implementation annex.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Definition</th>
<th>Values</th>

6 DATA CAPTURE GUIDELINES
The ‘AML GS-ESB carrier format annex provides guidance on the conventions that are to be used to encode grid points, and associated attribution (parameters), using a relevant implementation standard. The content of the AML GS-ESB is at the discretion of the producing authority.

6.1 CONTINUITY
Gridded datasets consisting of multiple digital source files should aim to be contiguous for consistency of display. To avoid duplication, grid points on the eastern and northern boundaries of a selected area should not be included, in case an adjacent area is added later.
7 DATA PRESENTATION

7.1 SCOPE
The way in which AML GS-ESB is displayed is dependent upon an individual customer’s requirement. How their systems are developed to display AML GS-ESB data will largely be governed by the:
• Environment in which the data is to be viewed
• Types of products that are to be displayed with the AML product

This Product Specification is designed to support the production and supply of Gridded Sediment - Environmental Seabed & Beach data. It does not address data presentation.
8  PROVISION OF DATA

8.1  GENERAL

8.1.1  File Format (Encapsulation)
The file format or encapsulation is exchange standard specific.

8.1.2  Auxiliary Information
All media containing AML products will contain cataloguing information regarding the coverage of the products contained within it. A complete AML catalogue is planned for future development.

8.2  DISTRIBUTION MEDIA
AML is available in the following format(s):

- CD-ROM
- DVD

Other approved means of distribution will be promulgated in due course. While data must be available to users on standard media, other media/transmission means may be agreed directly between producers and recipients.

8.3  VOLUME NAMING
AML volumes (defined as packages) may contain several datasets, each from a different product specification. The volume naming convention for AML 'Packages' is not defined by AML Product Specifications.

8.4  FILE NAMING

8.5  DIRECTORY STRUCTURE

8.6  ERROR DETECTION
Datasets will undergo file integrity checks that are dependent upon the exchange standard implemented.

8.7  COMPRESSION
See appropriate implementation annex.

8.8  ENCRYPTION
All AML products are unencrypted, irrespective of security classification.

8.9  HARDWARE AND SOFTWARE REQUIREMENTS
N/A.
9 TESTING METHOD

This product specification has been designed to achieve interoperability of AML data products and other digital data products. This is achieved by the separation of the data dictionary from the standard used to encode the data and by the use of internationally recognised standards for the transfer of the data.

It is the responsibility of the data producer to ensure that AML data products fully conform to this Product Specification and to the chosen transfer standard.
